1 CSS codes.

1. Prove that the relation $C_X \subset C_Z^\perp$ implies $H_Z H_X^\top = 0$, where H_Z and H_X are the parity check matrices of the codes C_X, C_Z . **[Solution.]** H_X^\top is the generator matrix of the subspace spanned by its columns, namely by H_X rows, which, by definition, are all the vectors who are perpendicular to codewords in C_X . Thus, H_X^\top is the generator matrix for the code C_X^\perp . Since $C_X^\perp \subset C_Z$ we get the relation $H_Z H_X^\top = 0$.
